INVITATION TO JOIN THE FI EMS GET TOGETHER FOR YOUNG SCIENTISTS

The Flagship Initiative brings together scientist from different disciplines at Heidelberg University to establish the cutting-edge topic of Molecular Systems Engineering at Heidelberg University and in the Heidelberg-Mannheim area together with its non-university partners such as EMBL, HITS, DKFZ and EMBL. <https://www.uni-heidelberg.de/en/fiems>

The topics covered by EMS are highly divers and comprise the development of new materials, methods, technologies, devices, and therapies at the molecular level using both natural and synthetically made components. This requires an alliance of disciplines such as chemistry, physics, biology, mathematics, and medicine plus theoretical computations and simulations.

We would like to bring together not only the senior scientists, but also the **young scientists on the PhD and Postdoc level** to

- facilitate scientific exchange
- give you the opportunity to present your work without supervisors
- get to know other people and labs and the possibilities they have
- create a network on this level of experience
- just have fun

If you are interested, just send an e-Mail to fi-ems@uni-heidelberg.de.

We hope many young scientist will join to expand the FI EMS community at Heidelberg University.
